International Journal of Fracture

CONTENTS OF VOLUME 104 (2000)

Vol. 104, No. 1, 2000

A crack in a confocal elliptic piezoelectric inhomogeneity embedded in an infinite piezoelectric medium	L.Z. WU	1–14
An interfacial edge crack in anisotropic bimaterial under anti-plane singularity	KYUNG W. LEE and YOUN Y. EARMME	15–22
Analysis of the driving force for a generally oriented crack in a functionally graded strip sandwiched between two homogeneous half planes	N. SHBEEB, W.K. BINIENDA and K. KREIDER	23–50
Effect of mode mixity on K-dominance and three dimensionality in cracked plates	SANTOSH PRABHU and JOHN LAMBROS	51–69
On the dependence of the Weibull exponent on geometry and loading conditions and its implications on the fracture toughness probability curve using a local approach criterion	P.P. MILELLA and N. BONORA	71–87
A method for dynamic fracture toughness determination using short beams	G. WEISBROD and D. RITTEL	89–103

Vol. 104, No. 2, 2000

Analysis of a compressive shear test for adhesion between elastomeric polymers and rigid substrates	A. JAGOTA, S.J. BENNISON and C.A. SMITH	105–130
Numerical calculation of stress intensity factors in functionally graded materials	G. ANLAS, M.H. SANTARE and J. LAMBROS	131–143
Fracture toughness analysis of circumferentially-cracked round bars	M. SCIBETTA, R. CHAOUADI and E. VAN WALLE	145–168
Buckling and cracking of thin films on compliant substrates under compression	B. COTTERELL and Z. CHEN	169–179
A simplified method for determining double-K fracture parameters for three-point bending tests	SHILANG XU and HANS W. REINHARDT	181–209

Vol. 104, No. 3, 2000

Crack propagation from a pre-existing flaw at a notch root. I. Introduction and general form of the stress intensity factors at the initial crack tip	JEAN-BAPTISTE LEBLOND and PIERRE MOURO	211–224
Crack propagation from a pre-existing flaw at a notch root. II. Detailed form of the stress intensity factors at the initial crack tip and conclusion	JEAN-BAPTISTE LEBLOND and PIERRE MOURO	225–239
A hybrid boundary element method for three-dimensional fracture analysis	CHAI GUOZHONG and ZHANG KANGDA	241–258
Numerical investigation of low cycle fatigue of aluminium reinforced by SiC–fibres	HEINZ ISMAR, FALKO SCHRÖTER and FRANK STREICHER	259–273
Influence of initial stress on fracture of a halfspace containing a penny-shaped crack under radial shear	V.M. NAZARENKO, V.L. BOGDANOV and H. ALTENBACH	275–289
Characteristics of three-dimensional stress fields in plates with a through- the-thickness crack	S.W. KWON and C.T. SUN	291–315
Perturbed cracks in two dimensions: An integral-equation approach	P.A. MARTIN	317–327

Vol. 104, No. 4, 2000

Creep analysis of surface-cracked plates by a creep line-spring method	CHAI GUOZHONG and MASAKI SHIRATORI	329–348
Identification of Gurson-Tvergaard material model parameters via Kalman filtering technique. I. Theory	ALBERTO CORIGLIANO, STEFANO MARIANI and BARBARA ORSATTI	349–373
Bridging stress relation from a combined evaluation of the *R*-curve and post-fracture tensile tests	T. FETT, D. MUNZ, X. DAI and K.W. WHITE	375–385
Crack tip stress fields for thin, cracked plates in bending, shear and twisting: A comparison of plate theory and three-dimensional elasticity theory solutions	A. ZUCCHINI, C. Y. HUI and ALAN T. ZEHNDER	387–407
Study of the relationship between *J*-integral and COD parameters under mixed mode I+II loading in aluminum alloy Ly 12	SHA JIANGBO, SUN JUN, ZUH PIN, DENG ZENGJIE and ZHOU HUIJUI	409–423
Volume contents		425–426
Author index		427
